

## 1. Turn the computer on.

- ✓ A dialog box will appear; as directed, press control alt del to sign in.
- ✓ At the prompt, type userid & password:  
userid = kwtech1  
password = mousepad11

NOTE: Expect temporary mouse freezes at periodic intervals (e.g., 5 minutes) due to automatic data collection programs.

## 2. Start the KWall application

- ✓ Roll the mouse to the top corner of Window #1 to access the Start button.
- ✓ Click on Start.
- ✓ Navigate through the Start menu to Shortcut to KW.exe.
- ✓ Click on Shortcut to KW.exe.

KWall screen numbering schematic.

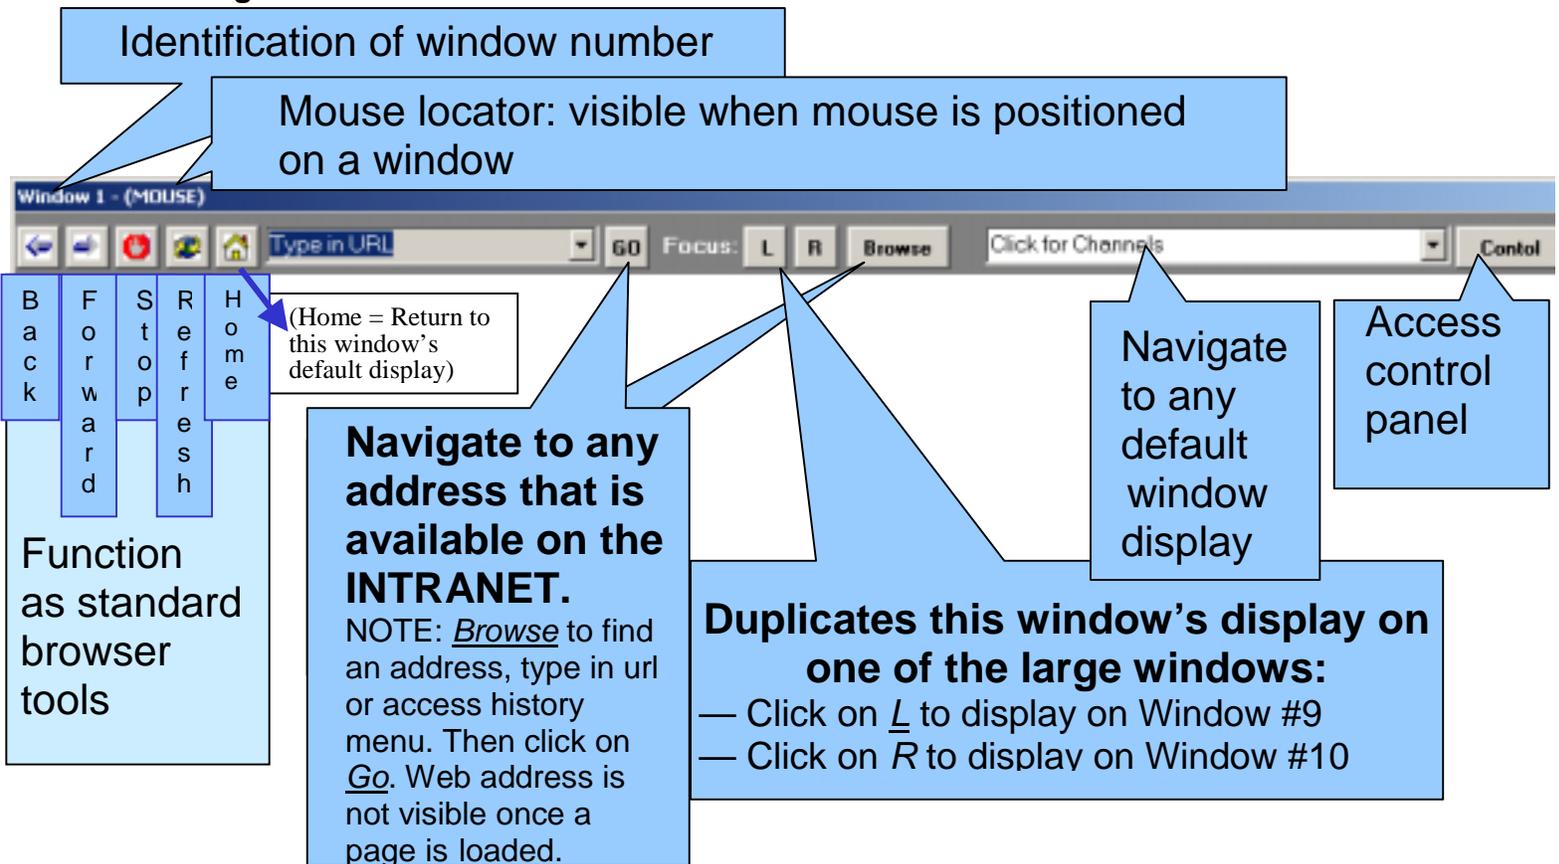

## 3. Launch C2PC—the application used by the KWall to display tactical maps.

- ✓ Click Y in the dialogue box, “Do you want to load C2PC?”

## 4. Launch window displays

- ✓ Click Close on the KWall splash that appears on Window #9.
- ✓ Browser pages will open on each window, showing pre-determined default displays such as anchor desk summaries.

## 5. Browser Page Toolbar

**Identification of window number**

**Mouse locator: visible when mouse is positioned on a window**

**Function as standard browser tools**

**Navigate to any address that is available on the INTRANET.**  
NOTE: Browse to find an address, type in url or access history menu. Then click on Go. Web address is not visible once a page is loaded.

**Duplicates this window's display on one of the large windows:**  
— Click on L to display on Window #9  
— Click on R to display on Window #10

**Navigate to any default window display**

**Access control panel**

(Home = Return to this window's default display)

## 6. KWall Control Panel

- ✓ Click the Control button at the top right of any KWall window to access Control Panel.

NOTE: The Control Panel will always appear on Window #9.

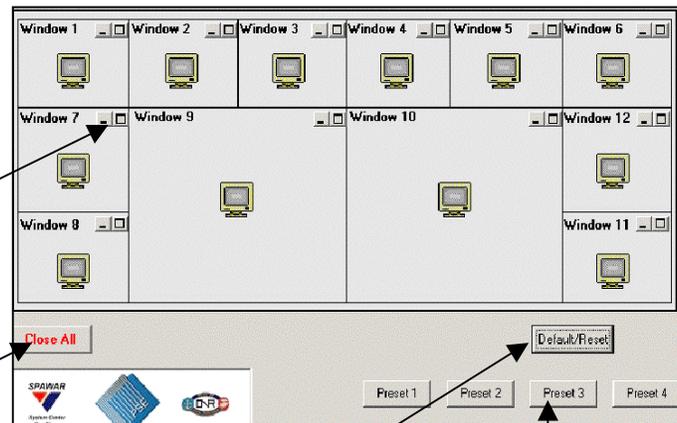

- ✓ Click on the Minimize button to hide the browser display on the indicated window, and click on the Maximize button to reinstate the display.

- ✓ Click on the Close All button to hide all browser displays and exit the KWall application.

NOTE: To re-launch, access & click on "Shortcut to KWall.exe."

- ✓ Click on the Default/Reset button to restore the last active browser displays on all windows.

- ✓ The "Presets" allow the KWall operator to hide certain browser windows, allowing other displays (such as C2PC or PowerPoint) to be viewed.

## 7. Non-Browser Applications

- ✓ Launching non-browser applications

–C2PC: Launched at start-up

–PowerPoint, Word, etc:

- Access the Start menu on Window #1
- Select the icon for the desired application

- ✓ Displaying non-browser applications

–Once launched, any application can be moved into any window by dragging into desired location

- Use the Control Panel to hide browser display in the desired location

## 8. Application Close-down Procedures

- ✓ KWall application (browser pages)

–Click on the Close All button on the control panel OR

–Click on the Close All button on the toolbar of Window #1

- ✓ C2PC

–Click on the topmost X at the top right corner of the window where C2PC is active
